Week 6

Date: 2026-10-05

Topics covered:

- `int argc, char **argv`
- `#include`
- `#define`
- `#if/#else/#endif`
- `assert()`
- `typedef/struct`
- `sizeof(struct)`/endianness/bitfields :)

Lecture 8 or some shit

Date: 2026-10-08

- `enum`
- `union`
- `sizeof(enum)`
- TAGGED UNIONS!!!!!!!!!!!! RAAHH RIIR!!!
- Abstract Data Types
  - You get to do shit with the data type, but not directly access the data
  - Also you keep hidden how it is implemented
- Sets, I guess
  - Union (\(\lor\)) (actually \(\cup\) but OK)
  - Intersection (\(\land\)) (actually \(\cap\) but OK)
  - Contains op \(\in\)
  - Not contains op \(\notin\)
  - Difference \(\setminus\)
  - Set equality: \(S = T \leftrightarrow \forall x (x \in S \rightarrow x \in T)\)
  - Subset but not equal: \(\subset\)
  - Subset or equal: \(\subseteq\)
  - Xor (symmetric difference): \(\oplus\)
